

**On-line Workshop organised by TSG 3 EUSAIR:
"What can EUSAIR do to enable the blue and green sustainable growth in
EUSAIR: MSP in EUSAIR state of the art"**

CONCLUSIONS

DATE: 9 November 2021

PLACE: Online

The workshop TSG 3/ TSG 1 EUSAIR took place online, on 9th November 2021.

Workshop participants note that:

1. It is essential to accelerate the integration of ecosystem services into all development planning projects.
2. There are examples of good practice at EUSAIR national level, but they need to be strengthened and cross-border linked to the involvement of blue and green corridors into entire macro-region. In particular, in development projects and plans - tool: RBMP / ICZM / MSP from national to cross-border to macro –regional plans. Example: The TSG 3 EUSAIR FLASHIP: ICZM/MSP for Gulf of Trieste, Jabuka Pit, Neum Bay, Otranto Chanel.
3. Connecting protected areas to cross-border interconnected networks on land, around the sea is a measure that can make a significant contribution to improving ecological status (GES) and biodiversity.
4. The implementation of blue and green corridors in the RBMP / ICZM / MSP process is a very concrete measure to increase water, food, energy and climate security at cross-border and regional level. The Action plan, which takes in consideration the marine analysis and legal opportunities, represented at the workshop must be taken in consideration.

MEDITERRANEAN COAST AND MACRO-REGIONAL STRATEGIES WEEK

Izola - Slovenia / Skopje - North Macedonia
9-11 / 22-23 November 2021
