

# Conclusions of TSG 3 Pillar sessions 8th EUSAIR Forum

Promoting climate change adaptation and disaster risk prevention through RBM, ICZM and MSP

## Conclusions

- Policy makers, organisations and governments have to work towards a more sustainable and resilient future for the region.
- Integrated coastal zone management, marine spatial planning and River Base Management with holistic ecosystem approaches are recognised as effective tool for sustainable development.
- Improving waste management practices and circular economy is also a priority in the region.
- Cooperation, knowledge sharing and integrated approaches to promote a sustainable and harmonious relationship between human activities and nature with appropriate use of Forest genetic resources have a crucial importance for sustainable forest management in the light of climatic change.
